March 2003

Bulletin 2556

## Preface

Annual data on the labor force, employment, and unemployment in States and substate areas are available from two major sources--the Current Population Survey (CPS) and the Local Area Unemployment Statistics (LAUS) program. The CPS is a sample survey of about 60,000 households nationwide conducted by the U.S. Census Bureau for the Bureau of Labor Statistics (BLS). The LAUS program is a Federal-State cooperative endeavor in which State employment security agencies prepare estimates using concepts, definitions, and estimation procedures prescribed by BLS.

This bulletin presents 2001 annual averages from the CPS for census regions and divisions, the 50 States and the District of Columbia, 50 large metropolitan areas, and 17 central cities. Data are provided on the employed and unemployed by selected demographic and economic characteristics.

Tables 1 through 11 present 2001 annual average labor force estimates for census regions and divisions. Similar information for all States and the District of Columbia appears in tables 12 through 23. Because of separate processing and weighting procedures, totals for the United States may differ slightly from the results obtained by aggregating the totals for the States. All of these data incorporate updated 1990 census-based population controls, adjusted for the estimated undercount. The 2000 census-based population controls will be reflected in the 2002 edition of this publication. The LAUS program uses the total CPS estimates for States and the District of Columbia as the official annual average labor force statistics.

Tables 24 through 28 display 2001 annual average rates, ratios, and percent distributions from the CPS for 50 large metropolitan areas and 17 central cities. Levels for the various labor force categories are not presented because independent 1990 census-based population controls, adjusted for the estimated undercount, generally are not available for geographic areas below the State level. **The CPS metropolitan area and city estimates may differ from the official estimates produced by the individual States through the LAUS program.** CPS estimates are

provided herein because they are the only current source of information on demographic and economic characteristics for these areas. Official 2001 annual average LAUS estimates for metropolitan areas appeared in the May 2002 issue of *Employment and Earnings*. Official LAUS estimates for metropolitan areas and cities were published on the BLS Web site. Geographic definitions for metropolitan areas in this publication reflect those issued by the US Office of Management and Budget (OMB) on June 30, 1993. (See appendix C.)

This bulletin was prepared in the BLS Office of Employment and Unemployment Statistics by the Division of Local Area Unemployment Statistics in collaboration with the Division of Data Development and Publications. Editorial assistance was provided by the Data Users and Publication Services Group.

Information in this bulletin is available to sensory impaired individuals upon request. Voice phone: 202-691-5200; Federal Relay Service: 1-800-877-8339. This material is in the public domain and, with appropriate credit, may be reproduced without permission.

# **Geographic Profile of Employment and Unemployment, 2001**

The Current Population Survey (CPS) is the regular monthly survey of about 60,000 households from which the national unemployment rate is derived. (See appendix A for concepts and definitions used in the CPS and appendix B for a description of the estimation procedures.)

The method for determining which annual average estimates of the labor force by demographic characteristics (age, sex, race, and Hispanic origin) and economic characteristics of the employed and unemployed to publish in this bulletin is explained in appendix B. Table B-1 lists the minimum bases required for publication for various geographic areas.

Estimates for census regions and divisions are shown in section I; data for States are shown in section II; and limited data for metropolitan areas and cities are shown in section III. Estimates of levels are not provided in section III because population controls needed to make estimates of levels comparable with those in the other sections of this publication are not available.

Because the estimates are based on a survey rather than on a complete census of the population, they are subject to sampling error. Consequently, error ranges have been calculated, in the form of 90-percent confidence intervals, and displayed for the unemployment rates in the first table of sections I, II, and III. In addition, appendix B provides tables from which the sampling error ranges can be obtained for the data in other tables in sections I and II. Separate error tables are not provided for each population group (such as total, white, black, or Hispanic). Instead, one table is used for all population groups for a given labor force characteristic, because differences in sampling errors are usually minimal.

<sup>1</sup> Error ranges are calculated at the 90-percent confidence interval, which means that if repeated samples were drawn from the same population and an error range constructed around each sample estimate, in 9 out of 10 cases the true value based on a complete census of the population would be contained within these error ranges.

<sup>2</sup> Error ranges cannot be properly computed when the number of sample cases is very small and/or the unemployment rate is low.

NOTE: Data for demographic groups are not shown when they do not meet BLS

publication standards of reliability for the particular area based on the sample in that area. See appendix B. Items may not add to totals because of rounding. Detail for race and Hispanic-origin groups will not add to totals because data for the "other races" group are not presented and Hispanics are included in both the white and black population groups. Because of separate processing and weighting procedures, totals for the United States differ from the results obtained by aggregating the totals for regions.

**Table 2. Census regions and divisions: Employed and unemployed persons by full- and part-time status, sex, age, race, and Hispanic origin, 2001 annual averages**

(In thousands)

Population group and area	Employed <sup>1</sup>									Unemployed

Pacific .....	4,106	3,594	123	280	110	762	187	540	34	322	57	

<sup>1</sup> Employed persons are classified as full- or part-time workers based on their usual weekly hours at all jobs regardless of the number of hours they are at work during the reference week. Persons absent from work are classified according to their usual status.

<sup>2</sup> Includes some persons at work 35 hours or more classified by their reason for working part time.

<sup>3</sup> Data are not shown when the labor force base does not meet BLS

publication standards of reliability for the particular area, based on the sample in that area. See appendix B.

NOTE: Items may not add to totals because of rounding. Detail for race and Hispanic-origin groups will not add to totals because data for the "other races" group are not presented and Hispanics are included in both the white and black population groups.

1 Less than 500 persons or less than 0.05 percent.

NOTE: Totals for the summary groups published include other occupations not shown separately. Items may not compute to displayed percentages

because of rounding. Detail for race and Hispanic-origin groups will not add to totals because data for the "other races" group are not presented and Hispanics are included in both the white and black population groups.

<sup>1</sup> Excludes persons with no previous work experience.

<sup>2</sup> Data are not shown when the labor force base does not meet BLS publication standards of reliability for the particular area, based on the sample in that area. See appendix B.

<sup>3</sup> Less than 500 persons or less than 0.05 percent.

NOTE: Totals for the summary groups published include other industries, not shown separately. Items may not add to totals or compute to displayed percentages because of rounding.

<sup>1</sup> Less than 500 persons or less than 0.05 percent.

<sup>2</sup> Data are not shown when the labor force base does not meet BLS publication standards of reliability for the particular area, based on the sample in that area. See appendix B.

NOTE: Totals for the summary groups published include other industries not

shown separately. Items may not compute to displayed percentages because of rounding. Detail for race and Hispanic-origin groups will not add to totals because data for the "other races" group are not presented and Hispanics are included in both the white and black population groups.

**Table 7. Census regions and divisions: Persons at work by sex, age, race, and Hispanic origin, 2001 annual averages**

(In thousands)

<sup>1</sup> Includes maternity or paternity leave and other family obligations.

<sup>2</sup> Includes labor dispute, bad weather, in school or training, civic or military duty, and all other reasons.

NOTE: Data for demographic groups are not shown when they do not meet BLS publication standards of reliability for the particular area based on the

sample in that area. See appendix B. Items may not add to totals because of rounding. Detail for race and Hispanic-origin groups will not add to totals because data for the "other races" group are not presented and Hispanics are included in both the white and black population groups.

<sup>1</sup> Data are not shown when the labor force base does not meet BLS publication standards of reliability for the particular area, based on the sample in that area. See appendix B.

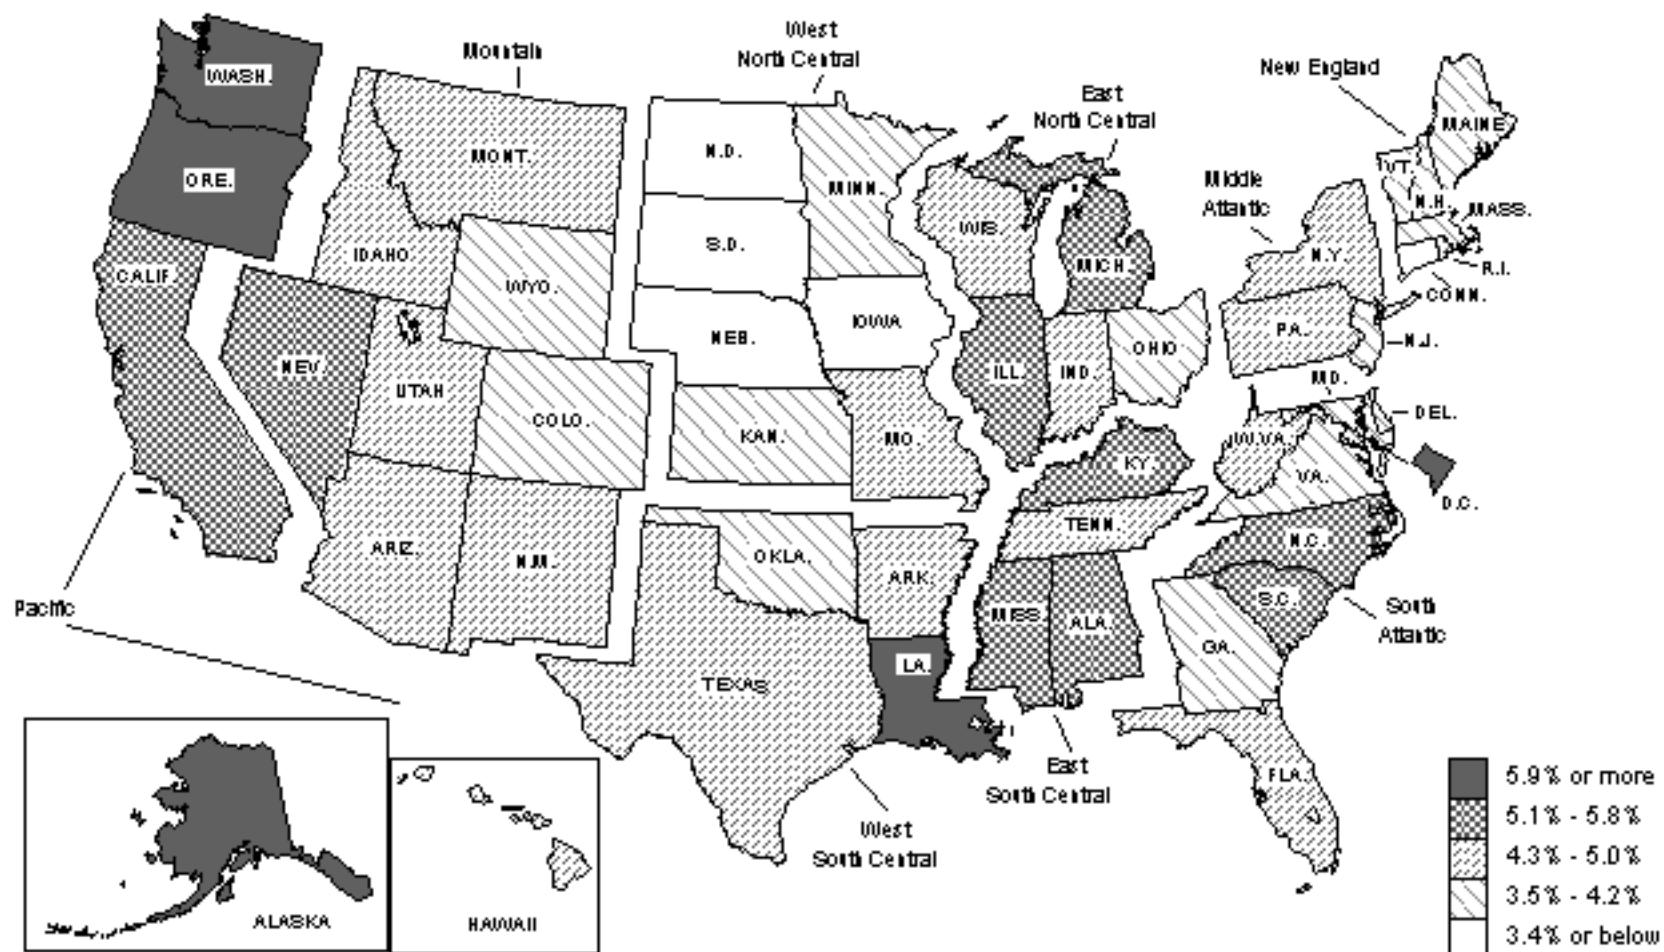

NOTE: Data for demographic groups are not shown when they do not meet BLS publication standards of reliability for the particular area based on the

sample in that area. See appendix B. Items may not add to totals because of rounding. Detail for race and Hispanic-origin groups will not add to totals because data for the "other races" group are not presented and Hispanics are included in both the white and black population groups.

<sup>1</sup> Error ranges are calculated at the 90-percent confidence interval, which means that if repeated samples were drawn from the same population and an error range constructed around each sample estimate, in 9 out of 10 cases the true value based on a complete census of the population would be contained within these error ranges.

<sup>2</sup> Less than 500 persons or .05 percent.

3 Error ranges cannot be properly computed when the number of sample cases is very small and/or the unemployment rate is low.

NOTE: Data for demographic groups are not shown when they do not meet BLS

publication standards of reliability for the particular area based on the sample in that area. See appendix B. Items may not add to totals because of rounding. Detail for race and Hispanic-origin groups will not add to totals because data for the "other races" group are not presented and Hispanics are included in both the white and black population groups. Because of separate processing and weighting procedures, totals for the United States differ from the results obtained by aggregating the totals for States.

**Table 13. States: Employed and unemployed persons by full- and part-time status, sex, age, race, and Hispanic origin, 2001 annual averages**

(In thousands)

<sup>1</sup> Employed persons are classified as full- or part-time workers based on their usual weekly hours at all jobs regardless of the number of hours they are at work during the reference week. Persons absent from work are classified according to their usual status.

<sup>2</sup> Includes some persons at work 35 hours or more classified by their reason for working part time.

<sup>3</sup> Data are not shown when the labor force base does not meet BLS publication standards of reliability for the particular area, based on the sample

in that area. See appendix B.

<sup>4</sup> Less than 500 persons.

NOTE: Items may not add to totals because of rounding. Detail for race and Hispanic-origin groups will not add to totals because data for the "other races" group are not presented and Hispanics are included in both the white and black population groups. Because of separate processing and weighting procedures, totals for the United States differ from the results obtained by aggregating the totals for States.

**Table 14. States: Employment status of the experienced<sup>1</sup> civilian labor force by occupation, 2001 annual averages**

(Numbers in thousands)

Employment status and State	Total	Managerial and professional specialty		Technical, sales, and administrative support			Service occupations	Precision production, craft, and repair	Operators, fabricators, and laborers			Farming, forestry, and fishing
		Executive, administrative, and managerial	Professional specialty	Technicians and related support	Sales	Administrative support, including clerical			Machine operators, assemblers, and inspectors	Transportation and material moving	Handlers, equipment cleaners, helpers, and laborers

<sup>1</sup> Excludes persons with no previous work experience.

<sup>2</sup> Data for a state are not shown when the labor force base does not meet BLS publication standards of reliability for the particular state, based on the sample in that area. See appendix B.

<sup>3</sup> Less than 500 persons or .05 percent.

NOTE: Data for a state are not shown when the labor force base does not meet BLS

publication standards of reliability for the particular state, based on the sample in that state. See appendix B. Items may not add to totals or compute to displayed percentages because of rounding. Because of separate processing and weighting procedures, totals for the United States differ from the results obtained by aggregating the totals for regions and States.

<sup>1</sup> Less than 500 persons employed or less than 0.05 percent of total employed.

NOTE: Data for demographic groups are not shown when they do not meet BLS publication standards of reliability for the particular area based on the sample in that area. See appendix B. Items may not add to totals because of rounding. Detail for race

and Hispanic-origin groups will not add to totals because data for the "other races" group are not presented and Hispanics are included in both the white and black population groups. Because of separate processing and weighting procedures, totals for the United States differ from the results obtained by aggregating the totals for States.

<sup>1</sup> Excludes persons with no previous work experience.

<sup>2</sup> Includes private household workers, self-employed and unpaid family workers, and mining.

<sup>3</sup> Includes self-employed and unpaid family workers, and mining, excludes agricultural workers.

<sup>4</sup> Includes mining, excludes private household workers.

<sup>5</sup> Data are not shown when the labor force base does not meet BLS publication standards of reliability for the particular area, based on the sample in that area. See

appendix B.

<sup>6</sup> Less than 500 persons.

NOTE: Data for a state are not shown when the labor force base does not meet BLS publication standards of reliability for the particular state, based on the sample in that state. See appendix B. Because of separate processing and weighting procedures, totals for the United States differ from the results obtained by aggregating the totals for States. Items may not add to totals or compute to displayed percentages because of rounding.

Table 17. States: Percent distribution of employed persons by sex, race, Hispanic origin, and industry, 2001 annual averages

Population group and State	Total employed <sup>1</sup>		Nonagricultural industries											Agriculture
	Number (In thou- sands)	Percent	Total <sup>2</sup>	Private nonagricultural wage and salary workers								Govern- ment		
				Total <sup>3</sup>	Construc- tion	Manufacturing			Trans- porta- tion, com- mu- ni- ca- tions, and pub- lic utilities	Trade	Finance, insurance, and real estate	Ser- vices <sup>4</sup>		
						Total	Durable goods	Non- durable goods

<sup>1</sup> Includes private household workers, self-employed and unpaid family workers, and mining.

<sup>2</sup> Includes private household workers, self-employed and unpaid family workers, and mining. Excludes agriculture.

<sup>3</sup> Includes mining.

<sup>4</sup> Excludes private household workers.

<sup>5</sup> Data are not shown when the labor force base does not meet BLS publication standards of reliability for the particular area, based on the sample in that area. See appendix B.

<sup>6</sup> Less than 500 persons employed or less than 0.05 percent of total employed.

NOTE: Data for demographic groups are not shown when they do not meet BLS publication standards of reliability for the particular area based on the sample in that area. See appendix B. Totals for the summary groups published include other industries, not shown separately. Items may not add to totals or compute to displayed percentages because of rounding. Detail for race and Hispanic-origin groups will not add to totals because data for the "other races" group are not presented and Hispanics are included in both the white and black population groups. Because of separate processing and weighting procedures, totals for the United States differ from the results obtained by aggregating the totals for States.

**Table 18. States: Employed persons by class of worker, 2001 annual averages**

(In thousands)

<sup>1</sup> Less than 500 persons or .05 percent.

NOTE: Data for demographic groups are not shown when they do not meet BLS publication standards of reliability for the particular area based on the sample in that area. See appendix B. Items may not add to totals because of rounding. Detail for race and Hispanic-origin groups will not

add to totals because data for the "other races" group are not presented and Hispanics are included in both the white and black population groups. Because of separate processing and weighting procedures, totals for the United States differ from the results obtained by aggregating the totals for States.

**Table 20. States: Persons at work 1 to 34 hours by sex, race, Hispanic origin, reason for working less than 35 hours, and usual status, 2001 annual averages**

(In thousands)

Population group and State	Usually work full time						Usually work part time							
	Total	Slack work or business conditions	Vacation or personal day	Holiday, legal or religious	Weather-related curtailment	Other reasons <sup>1</sup>	Total	Slack work or business conditions	Could only find part-time work	Child-care problems	Other family or personal obligations	In school or training	Retired or Social Security limit on earnings	Other reasons <sup>2</sup>

<sup>1</sup> Includes seasonal work, job started or ended, own illness, child-care problems, other family or personal obligations, labor dispute, in school or training, civic or military duty, and all other reasons.

<sup>2</sup> Includes seasonal work, health and medical limitations, full-time workweek less than 35 hours, and all other reasons.

<sup>3</sup> Less than 500 persons.

<sup>4</sup> Data are not shown when the labor force base does not meet BLS publication standards of reliability for the particular area, based on the sample in that area. See appendix B.

NOTE: Data for demographic groups are not shown when they do not meet BLS

publication standards of reliability for the particular area based on the sample in that area. See appendix B. Items may not add to totals because of rounding. Detail for race and Hispanic-origin groups will not add to totals because data for the "other races" group are not presented and Hispanics are included in both the white and black population groups. The estimates shown in this table for whites, blacks, and persons of Hispanic-origin who usually work part time may include a small number of persons at work 35 hours or more in the reference week. Because of separate processing and weighting procedures, totals for the United States differ from the results obtained by aggregating the totals for States.

**Table 22. States: Percent distribution of unemployed persons by sex, age, race, Hispanic origin, and reason for unemployment, 2001 annual averages — Continued**

Population group and State	Total unemployed		Job losers and persons who completed temporary jobs <sup>1</sup>		Job leavers	Reentrants	New entrants
	Number (In thousands)	Percent	Total	On temporary layoff			
<b>Hispanic origin</b>							
United States .....	1,037	100.0	51.3	16.8	10.1	28.6	10.0
California .....	351	100.0	58.0	22.1	6.7	26.2	9.1
Florida .....	96	100.0	52.5	( <sup>3</sup> )	12.7	21.8	( <sup>3</sup> )
Illinois .....	48	100.0	53.7	19.1	( <sup>3</sup> )	28.8	{ <sup>3</sup> }
New York .....	69	100.0	52.0	8.7	7.4	32.3	{ <sup>3</sup> }
Texas .....	175	100.0	40.2	( <sup>3</sup> )	16.0	30.7	( <sup>3</sup> )

<sup>1</sup> Formerly called "job losers".

<sup>2</sup> Less than 500 persons or 0.05 percent.

<sup>3</sup> Data are not shown when the labor force base does not meet BLS publication standards of reliability for the particular area, based on the sample in that area. See appendix B.

NOTE: Data for demographic groups are not shown when they do not meet BLS publication standards of reliability for the particular area

based on the sample in that area. See appendix B. Items may not add to totals because of rounding. Detail for race and Hispanic-origin groups will not add to totals because data for the "other races" group are not presented and Hispanics are included in both the white and black population groups. Because of separate processing and weighting procedures, totals for the United States differ from the results obtained by aggregating the totals for States.

**Table 23. States: Percent distribution of unemployed persons by sex, age, race, Hispanic origin, and duration of unemployment, 2001 annual averages**

Population group and State	Total unemployed		Less than 5 weeks	5 to 14 weeks	15 weeks and over						
	Number (in thou- sands)	Percent			Total	15 to 26 weeks	27 weeks and over				
							Total	27 to 51 weeks	52 weeks and over

<sup>1</sup> Data are not shown when the labor force base does not meet BLS publication standards of reliability for the particular area, based on the sample in that area. See appendix B.

NOTE: Data for demographic groups are not shown when they do not meet BLS publication standards of reliability for the particular area based on the sample in that area. See appendix B. Items may not

add to totals because of rounding. Detail for race and Hispanic-origin groups will not add to totals because data for the "other races" group are not presented and Hispanics are included in both the white and black population groups. Because of separate processing and weighting procedures, totals for the United States differ from the results obtained by aggregating the totals for States.

## **Section III. Estimates for Metropolitan Areas and Cities**

Labor force, employment, and unemployment levels from the CPS for metropolitan areas and cities usually shown in tables 24 through 28 are not provided because updated population controls are not available. As a consequence, only rates, ratios, and percent distributions are published and the usual table formats and sequence have been altered. Unemployment rates shown in table 24 may differ from the estimates produced through the LAUS program.

**Table 24. Selected metropolitan areas and cities: Civilian labor force participation rates, employment-population ratios, and unemployment rates by sex, age, race, and Hispanic origin, 2001 annual averages**

<sup>1</sup> Error ranges are calculated at the 90-percent confidence interval, which means that if repeated samples were drawn from the same population and an error range constructed around each sample estimate, in 9 out of 10 cases the true value based on a complete census of the population would be contained within these error ranges.

<sup>2</sup> Error ranges cannot be properly computed when the number of sample cases is very small and/or the

unemployment rate is low.

<sup>3</sup> Data do not reflect the official U.S. Office of Management and Budget definition. See appendix C.

NOTE: Data for demographic groups are not shown when they do not meet BLS publication standards of reliability for the particular area based on the sample in that area. See appendix B.

**Table 25. Selected metropolitan areas and cities: Percent distribution of employed persons by sex, race, Hispanic origin, and occupation, 2001 annual averages**

Population group and area	Total em- ployed <sup>1</sup>	Managerial and professional specialty		Technical, sales, and administrative support			Service occupa- tions	Precision production, craft, and repair	Operators, fabricators, and laborers				
		Executive, adminis- trative, and managerial	Profes- sional specialty	Techni- cians and related support	Sales	Admini- stra- tive support, including clerical			Machine operators, assem- blers, and inspectors	Transpor- ta- tion and material moving	Handlers, equipment cleaners, helpers, and laborers

<sup>1</sup> Includes farming, forestry, and fishing not shown separately.

<sup>2</sup> Data do not reflect the official U.S. Office of Management and Budget definition. See appendix C.

<sup>3</sup> Data are not shown when the labor force base does not meet BLS publication standards of reliability for the particular area, based on the sample in that area and

occupation. See appendix B.

<sup>4</sup> Less than 500 persons employed or less than .05 percent of total employed.

NOTE: Data for demographic groups are not shown when they do not meet BLS publication standards of reliability for the particular area based on the sample in that area. See appendix B.

**Table 26. Selected metropolitan areas and cities: Unemployment rates by occupation, 2001 annual averages**

Area	Total <sup>1</sup>	Managerial and professional specialty		Technical, sales, and administrative support			Service occupations	Precision production, craft, and repair	Operators, fabricators, and laborers		
		Executive, administrative, and managerial	Professional specialty	Technicians and related support	Sales	Administrative support, including clerical			Machine operators, assemblers, and inspectors	Transportation and material moving	Handlers, equipment cleaners, helpers, and laborers

## **Appendix A.**

### **Concepts and Definitions for Data Derived from the Current Population Survey**

Tables showing labor force status include provisional estimates of the civilian noninstitutional population 16 years and older as well as data on the civilian labor force, labor force participation rates, and unemployment rates. Population estimates usually are revised by the U.S. Census Bureau each year, and the revised estimates are incorporated into the CPS labor force levels. No revisions were made for 2001, however. This adjustment, when made, affects the estimates of labor force, employment, and unemployment, but does not affect percentages such as unemployment rates, participation rates, or employment-population ratios. Thus, levels contained in this publication may not be comparable with levels published prior to 2000 or after 2001 in *Geographic Profiles*.

The concepts and definitions underlying labor force data in use as of January 1994 are as follows:

*Civilian noninstitutional population.* Included are persons 16 years of age and older residing in the 50 States and the District of Columbia who are not inmates of institutions (for example, penal and mental facilities and homes for the aged) and who are not on active duty in the Armed Forces.

*Employed persons.* These are all persons who, during the reference week, (a) did any work at all (at least 1 hour) as paid employees, worked in their own business or profession or on their own farm, or worked 15 hours or more as unpaid workers in an enterprise operated by a member of the family, or (b) were not working but had jobs or businesses from which they were temporarily absent because of vacation, illness, bad weather, childcare problems, maternity or paternity leave,

labor-management dispute, job training, or other family or personal reasons, whether or not they were paid for the time off or were seeking other jobs.

*Unemployed persons.* Included are all persons who had no employment during the reference week; were available for work, except for temporary illness; and had made specific efforts to find employment some time during the 4-week period ending with the reference week. Persons who were waiting to be recalled to a job from which they had been laid off need not have been looking for work to be classified as unemployed.

*Duration of unemployment.* This represents the length of time (through the current reference week) that persons classified as unemployed had been looking for work. For persons on layoff, duration of unemployment represents the number of full weeks they had been on layoff.

*Reason for unemployment.* Unemployment also is categorized according to the status of individuals at the time they began to look for work. These reasons for unemployment are divided into five major groups: (1) *Job losers*, comprising (a) persons *on temporary layoff*, who have been given a date to return to work or who expect to return within 6 months (persons on layoff need not be looking for work to qualify as unemployed), and (b) *permanent job losers*, whose employment ended involuntarily and who began looking for work; (2) *Job leavers*, persons who quit or otherwise terminated their employment voluntarily and immediately began looking for work; (3) *Persons who completed temporary jobs* (included along with job losers in this publication), who began looking for work after the jobs ended; (4) *Reentrants*, persons who previously worked but were out of the labor force prior to beginning their job search; and (5) *New entrants*, persons who had never worked.

*Labor force.* This group comprises all persons classified as employed or unemployed in accordance with the criteria described above.

*Unemployment rate.* The unemployment rate represents the number unemployed as a percent of the labor force.

*Participation rate.* This represents the proportion of the civilian noninstitutional population that is in the labor force.

*Employment-population ratio.* This represents the proportion of the civilian noninstitutional population that is employed.

*Occupation and industry.* This information for the employed applies to the job held in the reference week. Persons with two or more jobs are classified in the job at which they worked the greatest number of hours. The unemployed are classified according to their last job. The occupational and industrial classification of CPS data is based on the coding systems used in the 1990 census.

*Class of worker.* The class-of-worker breakdown assigns workers to the following categories: Private and government wage and salary workers, self-employed workers, and unpaid family workers. Wage and salary workers receive wages, salary, commissions, tips, or pay in kind from a private employer or from a government unit. Self-employed persons are those who work for profit or fees in their own business, profession, trade, or farm. Only the unincorporated self-employed are included in the self-employed category in the class-of-worker typology. Self-employed persons who respond that their businesses are incorporated are included among wage and salary workers because, technically, they are paid employees of a corporation. Unpaid family workers are persons working without pay for 15 hours a week or more on a farm or in a business operated by a member of the household to whom they are related by birth or marriage.

*Hours of work.* These statistics relate to the actual number of hours worked during the reference week. For example, persons who normally work 40 hours a week but were off on the Columbus Day holiday would be reported as working 32 hours, even though they were paid for the holiday. For persons working in more than one job, the figures relate to the number of hours worked in all jobs during the week; all the hours are credited to the major job.

*At work part time for economic reasons.* Sometimes referred to as involuntary part time, this category refers to individuals who gave an economic reason for working 1 to 34 hours during the reference week. Economic reasons include slack work or unfavorable business conditions, inability to find full-time work, and seasonal declines in demand. Those who usually work part time must also indicate that they want and are available full-time work to be classified as part time for economic reasons.

*At work part time for noneconomic reasons.* This group includes those persons who usually work part time and were at work 1 to 34 hours during the reference week for a noneconomic reason. Noneconomic reasons include, for example: Illness or other medical limitations, childcare problems or other family or personal obligations, school or training, retirement or Social Security limits on earnings, and being in a job in which full-time work is less than 35 hours. The group also includes those who gave an economic reason for usually working 1 to 34 hours but said that they did not want to work full time or were unavailable for such work.

*Usual full- or part-time status.* Data on persons "at work" exclude persons who were temporarily absent from a job and therefore classified in the zero-hours-worked category, "with a job but not at work." These are persons who were absent from their jobs for the entire week for such reasons as bad weather, childcare problems, maternity or paternity leave, vacation, illness, or involvement in a labor dispute. In order to differentiate a person's normal schedule from his or her activity during the reference week, persons also are classified according to their usual full- or

part-time status. In this context, *full-time workers* are those who usually worked 35 hours or more (at all jobs combined). This group will include some individuals who worked less than 35 hours in the reference week for either economic or noneconomic reasons and those who are temporarily absent from work. Similarly, *part-time workers* are those who usually work less than 35 hours per week (at all jobs), regardless of the number of hours worked in the reference week. This may include some individuals who actually worked more than 34 hours in the reference week, as well as those who were temporarily absent from work.

*White, black, and other.* These are terms used to describe the race of persons. Included in the "other" group are American Indians, Alaska Natives, and Asians and Pacific Islanders. Because of the relatively small sample size in most areas, data for "other" races are not published at this time. In the enumeration process, race is determined by the household respondent.

*Hispanic origin.* This refers to persons who identified themselves in the survey enumeration process as Mexican, Puerto Rican, Cuban, Central or South American, or of other Hispanic origin or descent. Persons of Hispanic origin may be of any race; thus, they are included in both the white and black population groups.

## **Appendix B.**

### **Sampling and Estimation Procedures and Sampling Error Tables**

The estimates presented in this bulletin are based on annual averages of monthly data obtained from the CPS, a sample survey of the civilian noninstitutional population. The survey is conducted each month by the U.S. Census Bureau for the Bureau of Labor Statistics (BLS), and provides comprehensive data on the labor force, employed, and unemployed, including such characteristics as age, sex, race, Hispanic origin, occupation, and industry. The survey also provides data on the characteristics of those not in the labor force.

Each month, trained interviewers collect information from a scientifically selected sample about 60,000 occupied housing units, designed to represent the civilian noninstitutional population. Selected respondents are interviewed to obtain information about the employment status of each household member 16 years of age and over. The "reference week" is the calendar week (Sunday through Saturday) that includes the 12th of the month. Actual field interviewing is conducted during the following week, which is known as the "survey week."

#### **Sampling procedures**

The 2001 sample encompasses 754 sample areas, with coverage in every State and the District of Columbia. It is based to a large extent on information about the distribution of the population as reported in the 1990 decennial census. (A redesigned 1990 census-based sample was phased in during the April 1994 through July 1995 period.) These areas were selected by dividing the entire area of the United States into 2,007 primary sampling units (PSUs). With some minor exceptions, a PSU consists of a county or a number of contiguous counties. Most metropolitan areas constitute separate PSUs.

To improve the efficiency of the sample, the 2,007 PSUs are grouped into strata within each State. Then, one PSU is selected from each stratum, with the probability of selection proportionate to the relative population size of the PSU. PSUs in strata by themselves are called "self-representing" and are generally the most populous in each State. Other strata are formed by combining PSUs that are similar in such characteristics as population growth, proportion of blacks and Hispanics, and occupation/industry and age/sex distributions. PSUs selected from these strata are "non-self-representing," because each one chosen represents the entire stratum.

Within each of the selected PSUs, the number of households to be enumerated each month is determined in two steps. First, a sample of census enumeration districts (EDs) is selected using the population-size probability selection procedure. EDs are administrative units and contain, on average, about 300 households. Second, clusters of approximately four addresses (contiguous wherever possible) are selected to be enumerated within each designated ED.

Part of the sample is changed, or rotated, each month. A given rotation group is in the sample for 4 consecutive months, leaves the sample during the following 8 months, and then returns for another 4 consecutive months. A primary reason for rotating the sample is to minimize the lack of cooperation that may result from interviewing a constant panel indefinitely. The rotation plan provides for three-fourths of the sample to be identical from one month to the next and one-half to be identical with that from the same month a year earlier.

### **Estimating methods**

Under the estimating methods used in the CPS, all of the results for a given month become available simultaneously and are based on returns from the entire sample of respondents. The estimation procedure involves weighting the data from each sample person by the inverse of the probability of the person being in the sample. This gives a rough measure of the number of actual persons that each sample person represents. Through a series of estimation steps (outlined below), the selection probabilities are adjusted for noninterviews and survey undercoverage; data

from previous months are incorporated into the estimates through the composite estimation procedure.

1. *Noninterview adjustment.* The weights for all interviewed households are adjusted to the extent needed to account for occupied sample households for which no information was obtained because of absence, impassable roads, refusals, or unavailability of the respondents for other reasons. This noninterview adjustment is made separately for clusters of similar sample areas that are usually, but not necessarily, contained within a State. Similarity of sample areas is based on metropolitan area status and size. Within each cluster, there is a further breakdown by residence. The proportion of sample households not interviewed varies from 7 to 8 percent, depending upon a number of factors, including weather and vacations.
2. *Ratio estimates.* The distribution of the population selected for the sample may differ somewhat, by chance, from that of the population as a whole in such characteristics as age, race, sex, and State of residence. Because these characteristics are closely correlated with labor force participation and other principal measurements made from the sample, the survey estimates can be substantially improved when weighted appropriately by the known distribution of these population characteristics. This is accomplished through two stages of ratio adjustment, as follows:
  - a. *First-stage ratio estimation.* The purpose of the first-stage ratio adjustment is to reduce the contribution to variance that results from selecting a sample of PSUs rather than drawing sample households from every PSU in the Nation. This adjustment is made to the CPS weights in two race cells, Black and nonblack, and is applied only to PSUs that are non-self-representing and in those States that have a substantial number of black households. The procedure corrects for differences that existed in each State cell at the time of the 1990 census between the race

distribution of the population in sample PSUs and the race distribution of all non-self-representing PSUs.

b. *Second-stage ratio estimation.* This procedure substantially reduces the variability of estimates and corrects, to some extent, for CPS undercoverage. The CPS sample weights are adjusted to ensure that sample-based estimates of population match independent population controls. Three sets of controls are used:

- 1) 51 State controls of the civilian noninstitutional population 16 years of age and older,
- 2) National civilian noninstitutional population controls for 14 Hispanic and 5 non-Hispanic age-sex categories, and
- 3) National civilian noninstitutional population controls for 66 white, 42 black, and 10 "other" age-sex categories.

The independent population controls are prepared by projecting forward the resident population as enumerated on April 1, 1990. The projections are derived by updating demographic census data with information from a variety of other data sources that account for births, deaths, and net migration. Subtracting estimated numbers of resident Armed Forces personnel and institutionalized persons reduces the resident population to the civilian noninstitutional population. Estimates of net census undercount, determined from the Post Enumeration Survey, are added to the population projections. Prior to January 1994, the projections were based on earlier censuses, and there was no correction for census undercount.

3. *Composite estimation procedure.* The last step in the preparation of most CPS estimates makes use of a composite estimation procedure. The composite estimate consists of a weighted average of two factors: (1) the second-stage ratio estimate based on the entire sample from the current month and (2) the composite estimate for the previous month, plus an estimate of the month-to-month change based on the six rotation groups common to both months. In addition, a bias adjustment term is added to the weighted average to account for relative bias associated with month-in-sample estimates. The compositing procedure results in a reduction in sampling error beyond that which is achieved after the two stages of ratio adjustment.

### **Reliability of the estimates**

The estimates in this bulletin are based upon a sample of the population rather than a complete count. Therefore, they may *differ* from the figures that would have been obtained if it had been possible to take a complete census using the same questionnaire and procedures as are used in the CPS. There are two types of errors in an estimate based on a sample survey--sampling and nonsampling. The sampling error tables provided later in this appendix indicate the magnitude of the sampling error. They also partially measure the effect of some nonsampling errors in response and enumeration, but do not measure any systematic biases in the data.

*Sampling variability.* The standard error is primarily a measure of sampling variability, that is, the variation that occurs by chance because a sample rather than the entire population is surveyed. The sample estimate and its standard error enable one to construct confidence intervals, that is, ranges that would include the average result of all possible samples with a known probability. For example, if all possible samples were selected, each of these samples were surveyed under essentially the same conditions using the same sample design, and an estimate and its estimated standard error were calculated from each sample, then the following would occur:

1. Approximately 68 percent of the intervals from 1 standard error below the estimate to 1 standard error above the estimate would include the average result of all possible samples.
2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.
3. Approximately 95 percent of the intervals from 2 standard errors below the estimate to 2 standard errors above the estimate would include the average result of all possible samples.

The error of a sample estimate varies inversely with the size of the sample and directly with the size of the estimate. Hence, an estimate for a subgroup constituting a small proportion of a population will tend to have a larger error relative to its size than will an estimate for a larger subgroup.

### **Reliability standards**

The CPS sample design takes into consideration both national and State reliability. For the State data, a minimum reliability standard is set: An expected maximum coefficient of variation (CV) on the level of total unemployment of 8 percent annually. This is calculated based on a 6-percent unemployment rate. Because each State's design must meet the reliability standard, the CPS sampling rate differs by State. (The sampling rate is the proportion of all households that are selected for the sample.) Generally, the smaller the State population, the higher the sampling rate. The average State sampling rates range roughly from 1 in every 200 households to 1 in every 2,500 households in each stratum within the State.

## **Publication standards for State and area CPS data**

To achieve comparability of the data for regions, divisions, States, metropolitan areas, and cities for publication purposes, a unique requirement for minimum labor force, employment, or unemployment was developed for each area. This requirement is based on the known differences in sampling rates among these areas. Before estimates are published for a specific category (such as Hispanic unemployment in a particular State), a predetermined "critical cell" must meet a 50-percent CV requirement. As a result of this requirement, minimum bases for publication have been developed for each area. Table B-1 lists the minimum necessary base for publication of data in each of the regions, divisions, States, the District of Columbia, metropolitan areas, and cities appearing in this bulletin.

Estimates are not shown when they do not meet the minimum base for the State or area listed in table B-1. In tables showing the labor force status of the population, that is, the employed and unemployed, publishability is determined by whether the labor force level exceeds the minimum base for unemployment in table B-1. If the labor force level is less than the unemployment minimum base, all data elements--labor force, employment, unemployment, and unemployment rate--are suppressed. In all other tables, the determining factor is whether the size of the base of distribution exceeds the minimum base for employment or unemployment separately, depending on whether the table presents a distribution of employment or unemployment for the area or population subgroup. For example, in the percent distribution of unemployed persons by reason table, the entire line of data will be suppressed if the total unemployment is less than the unemployment minimum base. If a subgroup appears in the table (such as by sex or race), the subgroup also will be suppressed if the total for that reason for unemployment also does not meet the minimum base. Data are not published for any cell with a level of fewer than 500 persons or less than 0.05 percent of the total for a given characteristic.

## **Using the sampling error tables**

Tables B-2 through B-5 provide sampling errors for use in constructing 90-percent confidence intervals (approximately 1.6 standard errors) for major labor force characteristics. They are approximations and thus indicate the order of magnitude of the sampling error rather than the precise amount of the possible error in an estimate. Illustrations on the use of these tables are provided below. In all cases, the computations present the estimated levels in thousands of persons.

*Sampling error of an estimated number.* Table B-5 shows that an estimate of 50,000 unemployed persons in North Carolina will have an absolute sampling error of 10,000, or a relative sampling error of 20 percent ( $10,000/50,000$ ). In comparison, an estimate of 100,000 unemployed persons in North Carolina has an absolute sampling error of 14,000, yielding a relative sampling error of 14 percent ( $14,000/100,000$ ). A statement that unemployment in North Carolina is between 40,000 and 60,000 in the first instance, and between 86,000 and 114,000 in the second, can be made with approximately 90-percent confidence.

This can be interpreted as follows: if one were to draw all possible samples and make an estimate from each sample (using the same methods and techniques) and construct an interval around each estimate (using the sampling errors shown in the tables), then 90 percent of these intervals would contain the average value of all possible samples.

To convert a sampling error from 90-percent confidence, as displayed in the tables, to 68-percent confidence (1 standard error), multiply the sampling error shown in the tables by 0.63. To convert the sampling error from 90- to 95-percent confidence (approximately 2 standard errors) multiply the sampling error by 1.23. For the example given above, the sampling error at 90-percent confidence was 10,000. At 68-percent confidence, the error would be about 6,300 ( $10,000 \times 0.63$ ). At 95-percent confidence, the error would be about 12,300 ( $10,000 \times 1.23$ ).

*Sampling error of a difference.* To compute the error of a difference from the tables, an additional step is required. If, for instance, one wishes to know whether a change in the unemployment rate from one year to the next in a particular area for a particular population group is statistically significant, or whether the difference in the unemployment rate between two areas or population groups is statistically meaningful, the significance of the difference needs to be computed. (Differences between estimates for 2 consecutive years may be influenced to some extent by the redesign of the CPS concepts, questionnaire, and collection procedures, such as that which occurred in 1994.)

As noted above, differences can take two general forms: (1) Differences between population groups and/or geographic areas; or (2) differences for the same population group and geographic area over time. Either type of difference can be calculated using the following formula, and noting the limiting covariance assumption discussed below.

$$SE_d = ((SE_1^2 + SE_2^2) - 2C \times (SE_1 \times SE_2))^{1/2}$$

where:

$SE_d$  = the sampling error of the difference.

$SE_1$  = the sampling error of one group or year.

$SE_2$  = the sampling error of another group or year.

$C$  = the covariance (or relationship) term.

The  $SE_1$  and  $SE_2$  can be found in the appropriate table of *Geographic Profile* for each year if the comparison is between different years, because the size of the samples and, consequently, sampling errors may differ from year to year. Values for the covariance, or "C" term, for employment and unemployment for differences between *consecutive* years are as follows: For labor force or employment levels,  $C = 0.58$ ; for unemployment levels or rates,  $C = 0.37$ . It is important to note that these "C" terms are usable only for calculating the sampling error of a difference for over-the-year change for the *same geographic area and population group*.

Covariance terms for the relationship between different population groups or geographic areas in this bulletin are not available. When calculating sampling errors for differences between two *different* population groups or geographic areas, a "C" term of zero must be assumed. The effect of this assumption is: (1) If the relationship between two groups, areas, or years (differences for nonconsecutive years) is small, the "C" term can legitimately be ignored and the sampling errors will not be adversely affected, or (2) if there is a strong positive relationship between the two groups, areas, or years (differences for consecutive years), then the error computed without a "C" term will be overstated. This could lead one to erroneously state that a difference or change was *not* statistically significant when, in fact, it was. When there is a strong relationship over time for a labor force characteristic such as employment (that is, people tend to remain employed from one year to the next), the importance of using a "C" term when calculating the sampling error of a difference over time increases greatly.

The following example illustrates how to calculate a sampling error for a difference. Suppose one wished to know whether a *hypothetical* difference between the unemployment level of 250,000 for a particular population group in California and an unemployment level of 200,000 for the same group in New York was statistically significant at 90-percent confidence. Table B-5 gives the error for an unemployment level of 250,000 in California as approximately 24,000 and the error for an unemployment level of 200,000 in New York as 17,000. Using the formula described above without the "C" term produces the following results:

$$SE_1 = 24; SE_2 = 17$$

$$SE_1^2 + SE_2^2 = 865$$

$$SE_d = ((SE_1^2 + SE_2^2))^{1/2} = 29$$

Because each State's sample is independent, there is no measurable correlation between the two estimates and a "C" term of zero can be assured. Thus, the error of the difference is approximately 29,000. Because the actual difference (50,000) is greater than the error of the

difference, it can be stated, with 90-percent confidence, that the difference in the unemployment level is attributable to factors other than sampling variability alone.

*Sampling errors for unemployment rates.* Unemployment rates and error ranges for these rates are provided in tables 1, 12, and 24. This information can be used to derive a sampling error for an unemployment rate if one is needed. The error range is a 90-percent confidence interval around the unemployment rate. By subtracting the estimated unemployment rate from the upper bound of the range, the sampling error for that rate can be obtained. This sampling error can then be used in the above formula for computing the sampling error of a difference, or for whatever purpose the user chooses.

*Interpolation and extrapolation.* Although sampling errors are listed for selected levels of employment and unemployment in tables B-2 through B-5, users may wish to know the sampling error for an estimate whose value is not listed. To derive such a sampling error, it is necessary to use interpolation or extrapolation.

For example, in order to derive the sampling error for the 2001 total unemployment level for women in Washington, it is necessary to use interpolation because table B-5 contains no sampling error for an unemployment level estimate of 80,000. The following formula and accompanying example show how to interpolate for this estimate:

$$SE = \{[(A-G) / (F-G)] \times (X-Y)\} + Y$$

where:

SE = the sampling error for the estimated value.

A = the estimated value (80,000).

F = the table value (100,000) immediately above the estimated value.

G = the table value (50,000) immediately below the estimated value.

X = the sampling error of F (14,000).

Y = the sampling error of G (10,000).

$$SE = \{ [(80 - 50) / (100 - 50)] \times (14 - 10) \} + 10$$

$$SE = (0.6 \times 4) + 10$$

$$= 2.4 + 10$$

$$= 12.4$$

If the sample-based estimate lies outside the boundaries of the error tables, extrapolation can be used to approximate the sampling error. The formula for extrapolation is the same as that for interpolation; however, the "F" term becomes the highest value in the table and the "G" term becomes the next highest value.

### **Derivation of sampling errors**

The State and area sampling errors are developed using a generalized regression procedure and are *not* based on sample data for each individual area, population group, or labor force characteristic. As with all sampling error tables produced for CPS State and area data, a number of approximations are required in order to derive sampling errors that would apply to a wide variety of items. As a result, these sampling errors indicate the order of magnitude of a sampling error rather than a precise sampling error for any specific item. The sampling error tables are derived from standard error equations and special parameters developed by the Bureau of Labor Statistics. These parameters are available upon request from the Division of Local Area Unemployment Statistics, Room 4675, 2 Massachusetts Avenue NE, Washington, DC 20212-0001. Telephone: (202) 691-6406.

Tables B-2 through B-5 can be used for estimates pertaining to any race/ethnic group. As noted, the sampling errors are based on a generalized regression procedure and are approximate.

Generally, the degree of precision in these tables is slightly greater for whites (and the total of all race/ethnic groups) than it is for blacks or Hispanics.

## **Appendix C. Geographic Boundary Definitions**

Table C-1 of this appendix lists the States composing the census regions and divisions for which data are published in section I. Table C-2 provides the geographic definitions of the metropolitan areas for which data are published in section III. These data for metropolitan areas reflect the standards and definitions established by the U.S. Office of Management and Budget on June 30, 1993.<sup>1</sup>

Effective December 22, 1987, the boundary of the St. Louis metropolitan statistical area was redefined to include the part of Sullivan City in Crawford County, MO. This change is not reflected in the data for St. Louis shown in this bulletin, although the addition of entire counties in 1993 is reflected.

### **Metropolitan areas**

The general concept of a metropolitan area (MA) is that of a core area containing a large population nucleus, together with

adjacent communities that have a high degree of economic and social integration with that core.

A *Metropolitan Statistical Area (MSA)* consists of one or more counties and meets specified size criteria—either it contains a city of at least 50,000 inhabitants, or it contains an urbanized area of at least 50,000 inhabitants, and has a total population of at least 100,000.

A *Consolidated Metropolitan Statistical Area (CMSA)* is a metropolitan area that has a population of at least 1 million and that has been divided into two or more PMSAs (see below). The CMSA comprises the same geographic area as its constituent PMSAs.

A *Primary Metropolitan Statistical Area (PMSA)* is a sub-area within a CMSA. The designation of these subareas is based on specific criteria, including having a population of at least 100,000 that is at least 60-percent urban, and the support of local opinion. Areas that were designated separate metropolitan areas as of January 1, 1980, and are now part of a larger area, are designated as PMSAs unless local opinion does not support their continued separate designation for statistical purposes.

<sup>1</sup> The standards were published in the *Federal Register* on March 30, 1990; the definitions and a complete listing of the areas were published on June 30, 1993 in OMB release 93-17.

Table C-2. Geographic boundaries of metropolitan areas

State and area	Type of area	Definition
<b>Arizona</b> Phoenix-Mesa .....	MSA	Maricopa and Pinal Counties
<b>California</b> Los Angeles-Long Beach .....	PMSA	Los Angeles County
Oakland .....	PMSA	Alameda and Contra Costa Counties
Orange County .....	PMSA	Orange County
Riverside-San Bernardino .....	PMSA	Riverside and San Bernardino Counties
Sacramento-Yolo .....	CMSA	El Dorado, Placer, Sacramento, and Yolo Counties
San Diego .....	MSA	San Diego County
San Francisco .....	PMSA	Marin, San Francisco, and San Mateo Counties
San Jose .....	PMSA	Santa Clara County
<b>Colorado</b> Denver-Boulder-Greeley .....	CMSA	Adams, Arapahoe, Boulder, Denver, Douglas, Jefferson, and Weld Counties
<b>Connecticut</b> Hartford .....	MSA	Bristol, Hartford, and New Britain cities and Avon, Berlin, Bloomfield, Burlington, Canton, East Granby, East Hartford, East Windsor, Enfield, Farmington, Glastonbury, Granby, Manchester, Marlborough, Newington, Plainville, Rocky Hill, Simsbury, Southington, South Windsor, Suffield, West Hartford, Wethersfield, Windsor, and Windsor Locks towns in Hartford County; Barkhamsted, Harwinton, New Hartford, Plymouth, and Winchester towns in Litchfield County; Middletown city and Cromwell, Durham, East Haddam, East Hampton, Haddam, Middlefield, and Portland towns in Middlesex County; Colchester and Lebanon towns in New London County; Andover, Bolton, Columbia, Coventry, Ellington, Hebron, Mansfield, Somers, Stafford, Tolland, Vernon, and Willington towns in Tolland County; and Ashford, Chaplin, and Windham towns in Windham County
<b>District of Columbia</b> Washington .....	PMSA	District of Columbia; Calvert, Charles, Frederick, Montgomery, and Prince Georges Counties, MD; Alexandria, Fairfax, Falls Church, Fredericksburg, Manassas, and Manassas Park cities, and Arlington, Clarke, Culpeper, Fairfax, Fauquier, King George, Loudoun, Prince William, Spotsylvania, Stafford, and Warren Counties, VA; Berkeley and Jefferson Counties, W.VA
<b>Florida</b> Fort Lauderdale .....	PMSA	Broward County
Miami .....	PMSA	Miami-Dade County
Tampa-St. Petersburg-Clearwater .....	MSA	Hernando, Hillsborough, Pasco, and Pinellas Counties
<b>Georgia</b> Atlanta .....	MSA	Barrow, Bartow, Carroll, Cherokee, Clayton, Cobb, Coweta, DeKalb, Douglas, Fayette, Forsyth, Fulton, Gwinnett, Henry, Newton, Paulding, Pickens, Rockdale, Spalding, and Walton Counties
<b>Illinois</b> Chicago .....	PMSA	Cook, DeKalb, DuPage, Grundy, Kane, Kendall, Lake, McHenry, and Will Counties
<b>Indiana</b> Indianapolis .....	MSA	Boone, Hamilton, Hancock, Hendricks, Johnson, Madison, Marion, Morgan, and Shelby Counties
<b>Kentucky</b> Louisville .....	MSA	Bullitt, Jefferson, and Oldham Counties, KY; Clark, Floyd, Harrison, and Scott Counties, IN
<b>Louisiana</b> New Orleans .....	MSA	Jefferson, Orleans, Plaquemines, St. Bernard, St. Charles, St. James, St. John the Baptist, and St. Tammany Parishes

Table C-2. Geographic boundaries of metropolitan areas--Continued

State and area	Type of area	Definition
<b>Maryland</b> Baltimore .....	PMSA	Baltimore City and Anne Arundel, Baltimore, Carroll, Harford, Howard, and Queen Anne's Counties
<b>Massachusetts</b> Boston .....	PMSA	Taunton city and Berkley, Dighton, Mansfield, and Norton towns in Bristol County, MA; Beverly, Gloucester, Lynn, Newburyport, Peabody, and Salem cities and Amesbury, Danvers, Essex, Hamilton, Ipswich, Lynnfield, Manchester-by-the-Sea, Marblehead, Middleton, Nahant, Newbury, Rockport, Rowley, Salisbury, Saugus, Swampscott, Topsfield, and Wenham towns in Essex County, MA; Cambridge, Everett, Malden, Marlborough, Medford, Melrose, Newton, Somerville, Waltham, Watertown, and Woburn cities and Acton, Arlington, Ashland, Ayer, Bedford, Belmont, Boxborough, Burlington, Carlisle, Concord, Framingham, Holliston, Hopkinton, Hudson, Lexington, Lincoln, Littleton, Maynard, Natick, North Reading, Reading, Sherborn, Shirley, Stoneham, Stow, Sudbury, Townsend, Wakefield, Wayland, Weston, Wilmington, and Winchester towns in Middlesex County, MA; Franklin and Quincy cities and Bellingham, Braintree, Brookline, Canton, Cohasset, Dedham, Dover, Foxborough, Holbrook, Medfield, Medway, Millis, Milton, Needham, Norfolk, Norwood, Plainville, Randolph, Sharon, Stoughton, Walpole, Wellesley, Westwood, Weymouth, and Wrentham towns in Norfolk County, MA; Carver, Duxbury, Hanover, Hingham, Hull, Kingston, Marshfield, Norwell, Pembroke, Plymouth, Rockland, Scituate, and Wareham towns in Plymouth County, MA; Boston, Chelsea, and Revere cities and Winthrop town in Suffolk County, MA; Berlin, Blackstone, Bolton, Harvard, Hopedale, Lancaster, Mendon, Milford, Millville, Southborough, and Upton towns in Worcester County, MA; and Seabrook and South Hampton towns in Rockingham County, NH
<b>Michigan</b> Detroit .....	PMSA	Lapeer, Macomb, Monroe, Oakland, St. Clair, and Wayne Counties
<b>Minnesota</b> Minneapolis-St. Paul .....	MSA	Anoka, Carver, Chisago, Dakota, Hennepin, Isanti, Ramsey, Scott, Sherburne, Washington, and Wright Counties, MN; Pierce and St. Croix Counties, WI
<b>Missouri</b> Kansas City .....	MSA	Johnson, Leavenworth, Miami, and Wyandotte Counties, KS; Cass, Clay, Clinton, Jackson, Lafayette, Platte, and Ray Counties, MO
St. Louis .....	MSA <sup>1</sup>	Clinton, Jersey, Madison, Monroe, and St. Clair Counties, IL; St. Louis city and Franklin, Jefferson, Lincoln, St. Charles, St. Louis, and Warren Counties, MO
<b>New Jersey</b> Bergen-Passaic .....	PMSA	Bergen and Passaic Counties
Newark .....	PMSA	Essex, Morris, Sussex, Union, and Warren Counties
<b>New York</b> Buffalo-Niagara Falls .....	MSA	Erie and Niagara Counties
Nassau-Suffolk .....	PMSA	Nassau and Suffolk Counties
New York .....	PMSA	Bronx, Kings, New York, Putnam, Queens, Richmond, Rockland, and Westchester Counties
Rochester .....	MSA	Genesee, Livingston, Monroe, Ontario, Orleans, and Wayne Counties
<b>North Carolina</b> Charlotte-Gastonia-Rock Hill .....	MSA	Cabarrus, Gaston, Lincoln, Mecklenburg, Rowan, and Union Counties, NC; York County, SC
<b>Ohio</b>		

<sup>1</sup> This is not the official OMB definition of the St. Louis metropolitan statistical area. Excluded is the part of Sullivan City in Crawford County, MO.

Table C-2. Geographic boundaries of metropolitan areas--Continued

State and area	Type of area	Definition
Cincinnati .....	PMSA	Dearborn and Ohio Counties, IN; Boone, Campbell, Gallatin, Grant, Kenton, and Pendleton Counties, KY; and Brown, Clermont, Hamilton, and Warren Counties, OH
Cleveland-Lorain-Elyria .....	PMSA	Ashtabula, Cuyahoga, Geauga, Lake, Lorain, and Medina Counties
Columbus .....	MSA	Delaware, Fairfield, Franklin, Licking, Madison, and Pickaway Counties
Dayton-Springfield .....	MSA	Clark, Greene, Miami, and Montgomery Counties
<b>Oklahoma</b>		
Oklahoma City .....	MSA	Canadian, Cleveland, Logan, McClain, Oklahoma, and Pottawatomie Counties
<b>Oregon</b>		
Portland-Vancouver .....	PMSA	Clackamas, Columbia, Multnomah, Washington, and Yamhill Counties, OR; Clark County, WA
<b>Pennsylvania</b>		
Philadelphia .....	PMSA	Burlington, Camden, Gloucester, and Salem Counties, NJ; Bucks, Chester, Delaware, Montgomery, and Philadelphia Counties, PA
Pittsburgh .....	MSA	Allegheny, Beaver, Butler, Fayette, Washington, and Westmoreland Counties
<b>Rhode Island</b>		
Providence-Fall River-Warwick .....	MSA	Attleboro and Fall River cities and North Attleborough, Rehoboth, Seekonk, Somerset, Swansea, and Westport towns in Bristol County, MA; Barrington, Bristol, and Warren towns in Bristol County, RI; Warwick city and Coventry, East Greenwich, West Greenwich, and West Warwick towns in Kent County, RI; Jamestown, Little Compton, and Tiverton towns in Newport County, RI; Central Falls, Cranston, East Providence, Pawtucket, Providence, and Woonsocket cities, and Burrillville, Cumberland, Foster, Glocester, Johnston, Lincoln, North Providence, North Smithfield, Scituate, and Smithfield towns in Providence County, RI; Charlestown, Exeter, Narragansett, North Kingstown, Richmond, and South Kingstown towns in Washington County, RI
<b>Tennessee</b>		
Memphis .....	MSA	Crittenden County, AR; DeSoto County, MS; and Fayette, Shelby, and Tipton Counties, TN
<b>Texas</b>		
Dallas-Fort Worth .....	CMSA	Collin, Dallas, Denton, Ellis, Henderson, Hood, Hunt, Johnson, Kaufman, Parker, Rockwall, and Tarrant Counties
Houston .....	PMSA	Chambers, Fort Bend, Harris, Liberty, Montgomery, and Waller Counties
San Antonio .....	MSA	Bexar, Comal, Guadalupe, and Wilson Counties
<b>Utah</b>		
Salt Lake City-Ogden .....	MSA	Davis, Salt Lake, and Weber Counties
<b>Virginia</b>		
Norfolk-Virginia Beach-Newport News .....	MSA	Currituck County, NC; Chesapeake, Hampton, Newport News, Norfolk, Poquoson, Portsmouth, Suffolk, Virginia Beach, and Williamsburg cities and Gloucester, Isle of Wight, James City, Mathews, and York Counties, VA
<b>Washington</b>		
Seattle-Bellevue-Everett .....	PMSA	Island, King, and Snohomish Counties
<b>Wisconsin</b>		
Milwaukee-Waukesha .....	PMSA	Milwaukee, Ozaukee, Washington, and Waukesha Counties
